

IO/DIM6/8 Multiplex Signal Module

8 Input operation (Link LK fitted)

INPUTS	V value	mA value	Output Signal	Time in seconds
Start/Synchronisation	10V	20mA	10V or 20mA	4 secs
Input 1	0.6V	5.00	Binary Combined Value	4 secs
Input 2	1.2V	5.99		
Input 3	2.4V	7.98		
Input 4	4.8V	11.96		
Input 5	0.6V	5.00	Binary Combined Value	4 secs
Input 6	1.2V	5.99		
Input 7	2.4V	7.98		
Input 8	4.8V	11.96		
BACK TO START				

The DIM8 output signal is transmitted in a time frame of 4 seconds for the inputs 1 to 4 and then 4 seconds for the inputs 5 to 8. The time frame sequence is synchronised by a 10V or 20mA signal as shown in the above table. The DIM8 mode is particularly useful for applications where BMS outstations have restrictive analogue input capability enabling 8 digital inputs to be converted to 1 analogue output.

6 Input Operation (Link LK removed)

Input 1	Input 2	Input 3	Input 4	Input 5	Input 6
0.16V	0.31V	0.63V	1.25V	2.5V	5.0V
4.25mA	4.50mA	5.00mA	6.00mA	8.00mA	12.00mA

DESCRIPTION

The IO/DIM6/8 is design to accept Volt free digital inputs and convert the inputs to a multistage voltage (0-10V) or multistage milliamp (4-20mA) output.

The configuration of 6 or 8 inputs is link selectable. The DIM6 input is binary providing 64 levels of output whilst the 8 input mode is a multiplexed signal of 2 x 4 inputs on a time base (see tables for output modes and values).

FEATURES

- * 24 Volt AC or DC supply.
- * 6 or 8 Volt free Digital Inputs.
- * 0-10V or 4-20mA output.
- * Voltage output trimmer.
- * Multiplexed output values.
- * mA output trimmer.
- * LED status Indication.
- * DIN Rail mounting.

SPECIFICATION

Input	6 or 8 Volt free
Output	0-10V DC (o/p impedance >100 Ω) 4-20mA (load 500 Ω)
Output Format	See Tables
Power Supply	24V AC/DC (± 10%)
Power Consumption	Max 30mA + output load
LED indication	When input contacts closed
Operating Temperature	-10 to + 40°C
Terminals	Max cable size 2.5mm
Dimensions	82mm High 57mm Wide 43mm Deep

Voltage Output accuracy = +/- 2.5% of stated value
mA output accuracy = +/- 1% of stated value

The IO/DIM8 selection operates with a synchronisation 10V or 20mA Multiplexed Output for 4 seconds followed a second signal for 4 seconds illustrating the status of inputs D1-D4. A third signal for a further 4 seconds will illustrate the status of D5-D8 inputs.

After this the 10V or 20mA synchronisation signal will occur and the cycle repeats.
